

Event Management Platform — Architecture & Scope Response

From: Kidus (Lead SWE & Architect)

To: Business Manager

Date: April 30, 2026

Re: Response to MVP Requirements Document

What This Document Covers

You sent me the MVP requirements. I've analyzed them, studied the market, and mapped out exactly what we're building and how. This document gives you:

- What I'm upgrading from your original scope (and why)
- Brand direction — 3 options, you pick
- Who we're competing with (and why we win)
- Exactly what ships in V1 (4 weeks) and what's V2
- The timeline, week by week

1. Requirements — What I'm Changing

Your requirements were solid. I'm keeping the core structure but upgrading every feature to enterprise-grade. Here's what that means:

Your Requirement	What I'm Actually Building
Simple registration form (name, phone, email)	Full ticketing system — multiple ticket tiers (VIP, General, Early Bird), QR codes, digital tickets, waitlist for sold-out events
Email notifications (confirmation)	Branded email templates, automated reminders 24h and 1h before events, registration digests for organizers
Basic analytics (views, registrations)	Full analytics dashboard — conversion rates, revenue tracking, registration trends over time, geographic breakdown
Admin: approve/reject events	Complete moderation queue with reviewer notes, organizer verification badges, featured event scheduling with duration control, full audit log
"Optional SMS later"	Confirmed V2. Same with push notifications — those come with the mobile app
Payment not mentioned	V2. V1 handles free events and "pay at the door" ticketing. Chapa/Telebirr integration comes in V2 once we have traction

Bottom line: Every feature you listed is in, but none of them are "basic." We're shipping enterprise quality from day one.

2. The Three User Roles

This stays exactly as you defined it. Three roles, clean separation:

- Attendees** — Browse events, register, get QR tickets, receive reminders. That's their world. Clean, fast, beautiful.
- Organizers** — Create events with a rich editor, set up ticket tiers, manage registrations, scan QR codes at the door, see analytics. They're self-sufficient — no need to contact us for anything.
- Admin (Us)** — Approve/reject events, feature events on homepage, verify organizers, manage users, see platform-wide analytics. We control quality.

Target Market

Detail	
City	Addis Ababa (expandable later)
Event Types	Corporate conferences, tech meetups, training workshops, networking, seminars
Attendees	Young professionals, 25-40, smartphone-first
Organizers	Training companies, corporate HR, tech communities, professional associations, NGOs
Language	English (V1). Amharic in V2
Revenue	Free platform (V1) → Commission on paid tickets (V2)

3. Brand Direction — Pick One

Three options. Each works. You choose.

Option A: "Qene" (ቅኔ)

"Art/Poetry" in Amharic. Events as art.

- **Tagline:** "Where Addis Gathers"
- **Colors:** Deep Gold + Midnight Black + Warm White
- **Vibe:** Culturally rooted, sophisticated, premium
- **Best for:** Standing apart from every generic tech platform. Local trust. Memorable.
- **Risk:** Amharic character complicates domain naming. May need explanation for international users.

Option B: "Pulse Addis"

The heartbeat of Addis Ababa's event scene.

- **Tagline:** "Feel the Beat of Addis"
- **Colors:** Electric Violet + Cyan Accent + Deep Slate
- **Vibe:** Tech-forward, startup energy, modern dark aesthetic
- **Best for:** Tech community, young professionals, looks like a world-class product immediately
- **Risk:** Less culturally specific. Needs very high design execution to avoid feeling generic.

Option C: "Tikdem" (ትቅደም)

"Forward / Progress" in Amharic.

- **Tagline:** "Addis, Moving Forward"
- **Colors:** Emerald Green + Gold Accent + Off-White
- **Vibe:** Professional, trustworthy, growth-oriented
- **Best for:** Corporate/B2B positioning, government and NGO partnerships
- **Risk:** Green can feel generic. Needs strong logo to differentiate.

Your call. Once you pick, I'll lock in the design system in Week 1.

4. Competition — Where We Sit

What exists in Addis right now

Who	What They Do	Why We're Different
Afromile / LinkUp Addis	Event listings buried inside a broader media/commerce platform	We're event-first. The entire product exists for events.
Prana Events, Flawless Events, Amen	Traditional event agencies — you hire them to run your event	We're a self-service platform. Organizers do it themselves, we provide the tools.
Facebook Events	Informal event posts	We have ticketing, QR check-in, analytics, organizer dashboards. Facebook has none of that.

The gap: Nobody in Addis Ababa offers a dedicated, modern, self-service event platform. People are using Facebook Events + WhatsApp + Excel spreadsheets. That's our opening.

Global platforms we're drawing from

Platform	What I'm Taking
Eventbrite	Feature completeness — filters, ticketing tiers, organizer tools, check-in system
Lu.ma	Design standard — minimalist, fast, event pages that look incredible
Partiful	Social energy — RSVP simplicity, sharing that feels fun
Bizzabo	Dashboard depth — analytics that organizers actually want to look at
Linear	Interface philosophy — calm, fast, keyboard-friendly, smooth animations
Afromile	Local context — understanding what Addis users expect

Our position

We're building something **more feature-rich than Lu.ma, more beautiful than Eventbrite, and made specifically for Addis Ababa.** That's the pitch.

5. What V1 Ships (4 Weeks)

Attendee Features

Feature	What It Does
Event Discovery	Grid of events, infinite scroll, curated homepage sections
Smart Filters	Category, date, sub-city, free vs paid, event type
Search	Keyword search across titles, descriptions, organizer names
Event Detail Page	Rich article-style page — banner, description, map, organizer info, gallery
Registration	Register in 30 seconds. Name, email, phone. Done.
Digital Ticket	QR code ticket via email, downloadable
Reminders	Automated emails 24h and 1h before the event
History	All your upcoming and past events in one place

Organizer Features

Feature	What It Does
Event Creation	Rich text editor, image upload, multiple ticket tiers
Dashboard	All events with metrics — views, registrations, conversion rate
Registration Management	Attendee list with search, filter, CSV export
QR Check-In	Scan attendee phones at the door
Analytics	Per-event: views over time, registration trends, geography
Duplicate Event	Clone an existing event to create a new one faster
Draft & Preview	Save drafts, preview before submitting for review

Admin Features

Feature	What It Does
Moderation Queue	Approve/reject events with notes
Featured Events	Pin events to homepage, set duration
User Management	View users, change roles, deactivate
Organizer Verification	Approve organizer applications, give verified badges
Platform Analytics	Total events, registrations, active users, growth
Audit Log	Every admin action is recorded

What's NOT in V1

Feature	Why	When
Online payments (Chapa/Telebirr)	Regulatory complexity, needs traction first	V2
Mobile app (iOS/Android)	Web-first. Mobile comes after web proves the concept	V2
SMS notifications	Needs SMS gateway setup	V2
Amharic language	Translation effort	V2
Push notifications	Needs mobile app	V2
Recurring events	Additional complexity	V2
Seat maps	Enterprise feature	V2+

6. Timeline — 4 Weeks

WEEK 1	WEEK 2	WEEK 3	WEEK 4
Foundation Launch	Discovery	Ticketing	Dashboards &
• Project setup dashboard • Database design • User accounts • Design system • Brand assets polish • Role system tuning	• Event listing page • Filters & search • Event detail page • Homepage curation • Category pages • Featured carousel	• Ticket tiers • Registration flow • QR code generation • Email notifications • Digital tickets • Waitlist	• Organizer • Admin panel • Analytics • QR check-in • Testing & • Performance • Go live
✓ Users can log in and see their role and appropriate view	✓ Events are browsable and searchable	✓ Full registration working end-to-end	✓ Platform complete deployed

7. V2 — What Comes After Launch

Once V1 is live and we have real users, V2 expands across four tracks:

Track 1: Money (Weeks 5-7)

- Chapa / Telebirr payment integration

- Platform commission on paid tickets
- Organizer payout dashboard
- Refund management
- Revenue analytics

Track 2: Mobile App (Weeks 6-10)

- iOS & Android app via Expo
- Push notifications
- Native QR scanner
- Offline ticket access
- "Events near me" with GPS

Track 3: Communication (Weeks 5-8)

- SMS notifications
- Amharic language support
- Organizer → attendee messaging
- Calendar integration (Google/Apple)

Track 4: Advanced (Weeks 8-12)

- Recurring events (weekly/monthly series)
- Seat maps for large venues
- Sponsor management
- AI-powered event recommendations
- Advanced analytics (cohorts, retention, predictions)

8. Technical Approach (What You Need to Know)

You don't need the technical details — that's my department. But here's what you should know:

What	What It Means For You
Web-first	Runs in any browser. No app download needed for V1.
Enterprise-grade design	It will look expensive. Dark mode, smooth animations, premium feel.
Secure	Each user type only sees what they should. Data is encrypted. Standard stuff.
Fast	Pages load in under 1.5 seconds. Search is instant.
Works on phones	Fully responsive from day one. Phones, tablets, desktops.
Mobile-ready architecture	When we build the app in V2, 60%+ of the work is already done.
Scalable	100 users or 100,000 users — same system, no rebuild needed.

9. What I Need From You

#	What	By When
1	Pick a brand (A, B, or C)	May 2
2	Confirm this V1 scope works	May 2
3	Confirm 4-week timeline	May 2

Once those three things are locked, I finalize the technical architecture and we start building.

Let me know your picks. — K
